Summary

Summary	I
Figures Index	III
Tables index	V
Abstract	VIII
Introduction	1
1.1 The importance of hydrogels in food systems	2
1.2 Natural anionic hydrogels in food	2
1.2.1 Sodium Alginate	3
1.2.2 Xanthan Gum	4
1.2.3 Olive	5
1.3 Polyelectrolyte hydrogel	5
1.3.1 Introduction	5
1.3.2 Chemical characterization	6
1.3.3 Poroviscoelastic behaviour	10
1.4 Modelling approach	11
1.5 Project objectives.....	12

Mathematical Modelling	13
2.1 introduction to continuum mechanics	14
2.1.1 The displacement field and the deformation gradient __	15
2.2 Model Assumptions	16
2.3. Dissipation Inequality.....	17
2.3.1 Elastic contribution: _____	18
2.3.2 Free Energy of mixing _____	23
2.3.3 Free Energy of Ionization _____	24
2.3.4 Free energy of dissociation _____	25
2.3.5 Electroneutrality conditions and charges balance _____	25
2.3.6 Helmholtz free energy for a "large" electroneutral anionic hydrogel _____	27
2.3.7 Volumetric constraint _____	28
2.4 Derivation of Constitutive Equation	29
2.5 Steady-State Analysis	31
2.5.1 External concentration calculation _____	31
2.5.2 External chemical potential _____	32
2.5.3 Internal chemical potential _____	32
2.5.4 Implementation in Matlab _____	35
Results and discussion	37
3.1 Swelling analysis	38
3.2 Analyze the effects of the number of ionizable group on the hydrogel.....	40
Conclusion	47
Bibliography	50

Abstract

Anionic polysaccharides polymers are class of polyelectrolyte hydrogels. They have a wide range of application in the food industry, such as shelf-life extension, flavour release, nutraceutical preservation, and food packaging. Polyelectrolyte hydrogels are linear, slightly crosslinked polymers containing ionizable groups on their backbone. Additionally, they are sensitive to pH changes.

In this work, the monophasic model is used to describe the steady-state behaviour of polyelectrolyte hydrogels. As a result of ionizable groups' existence, there are four contributions in the Helmholtz free energy: the elastic ones, the term of mixing of the solvent with the network, the term of mixing of the ions with the solvent, and the term of dissociation of acidic groups. Electroneutrality assumption also has been considered in this work.

In the comparative study, the model has been used to simulate hydrogels' behaviour reported in the literature. From the results, it can be established that the model's swelling ratios can be calibrated to fit the actual behaviour of the literature findings. This conclusion is evident from the simulation results, as the initial concentration of the ionizable groups present in the polymer chain increased with an increase in the PAA concentration of each gel reported. Comparing the model's results and literature showed a proportional dependence of the swelling behaviour on the number of dissociation groups, indicating the model's realistic results.

Acknowledgement

First and foremost, praises and thanks to the God, the Almighty, for His showers of blessings throughout my research work to complete the research successfully.

I would like to express my deep and sincere gratitude to Professor Lamberti, for the trust he has placed in me during this journey, for the love and passion with which he dedicates himself every day to his students. It was a great privilege and honour to work and study under his supervision. I would also like to thank to my co-supervisor Diego for giving me the opportunity to do research and providing invaluable guidance throughout this research. His dynamism, vision, sincerity and motivation have deeply inspired me. He has taught me the methodology to carry out the research and to present the research works as clearly as possible. I am extremely grateful to my co-supervisor Raffaella for the patience he had with me, for always being a point of reference, for encouraging and encouraging me to give my best and spending her valuable time guiding me to successfully achieve the work in the best way.

I am extremely grateful to my parents for their love, prayers, caring and sacrifices for educating and preparing me for my future. I am very much thankful to my husband Waleed for his love, understanding, prayers and continuing support to complete this research work.

Finally, a special thanks to the university of Salerno for this golden opportunity .
